

Eskimo Ice

For Serious Tournament Anglers

Self-Contained
Model EI600D-115

Crushed ice — preferred by fishermen, cools more quickly and packs better. Ice is produced continuously and pumped from a remote location to nearly any desired location whether it be to a fish box, drink box or coolers. Easy to install units are designed to be mounted below deck and protected from salt spray. Eskimo Ice Units can produce up to 600 pounds (272kg) of ice a day, up to 25 pounds (11.3kg) per hour, with discharge hose lengths up to 35 feet (10.6m) under normal operating conditions.

All self-contained and remote Eskimo Ice systems have Smart Logic Digital Displays. The system includes an automatic reset for key functions preventing owner from going to the machine space. The full menu of sensor and status lights monitor gas pressures, water level, ice clogs, ice levels, auger motor and compressor.

Key Benefits

- Self-contained and remote models with digital controls
- Up to two remotely mounted digital displays/ user interface panels
- Pre-charged system
- Start time delay
- Sensors monitor all functions of system
- Includes water filter
- Manual reset to restart system from lock-out
- Improved fresh-water float switch
- Photo-electric ice level sensor
- Redesigned refrigerant meter for improved performance in cold water
- Optional covers for sides and top for protection and improved appearance

Specification Details for Eskimo Ice Series

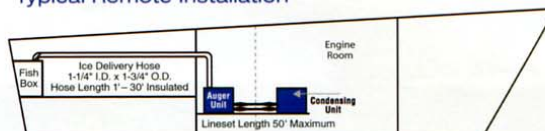

Remote Models

Model	Remote Condensing Unit	Remote Auger Unit	Remote Condensing Unit	Remote Auger Unit	Remote Control
