Material: aluminium

Contains acombined CSI-DC/alarm

Contacts indicate if the charger is ON or in general failure

DC alarm set points can be adjusted by use of the adjustment interface

PN 70404100

Description

You want to stay in complete control of the situation and have accurate information. Guesswork is not good enough when it comes to the status of your power system.

The Monitor C-4-RB is a basic remote monitor for the Mass and IVO Smart battery chargers. The basic remote control does indicate the status of the charge control by six high power LEDs and specifies the current charging phase (on-bulk charge, absorption or float). The remote control is easy to install and can be used as an interface for a custom made panel or for a dual remote indicator. A connection cable is not included.
