

## Transfer System (110/230V) (6 kVA)

PN 55010600

### Description

Combined with an IVET transformer, this transfer system ensures that the shore voltage is correctly adapted. As a consequence a 230/50Hz installation will work without problems when connected to a 120V/60Hz shore power point. This occurs, for example, in the United States and the Caribbean. To convert 50Hz into 60Hz or vice versa, a battery charger, inverter or frequency converter is needed. Mastervolt supplies three automatic Transfer systems: of 6, 9 and 13 kVA capacity respectively.

### Specifications

Voltage	110/230V
Power	6 kVA
Maximum input current	60A at 110V; 30A at 230V
Weight	12 kg
Dimensions (L x W x H)	400 x 300 x 210 mm

### Accessories

IVET 2.5 (E-kern) (in cabinet) Multi tap

IVET 3.5 (E-kern) (in cabinet) Multi tap

IVET 4.5 (E-kern) (in cabinet) Multi tap

IVET 6 (E-kern) Multi tap
